# Evaluation of the security of smartwatch communication

## Research question

- How secure is the communication between the smartwatch and the smartphone?
- Is it possible to eavesdrop any data exchanged during this communication?
- Is it possible to change the content of the data exchanged?
- How the vulnerabilities found (if any) could be addressed?

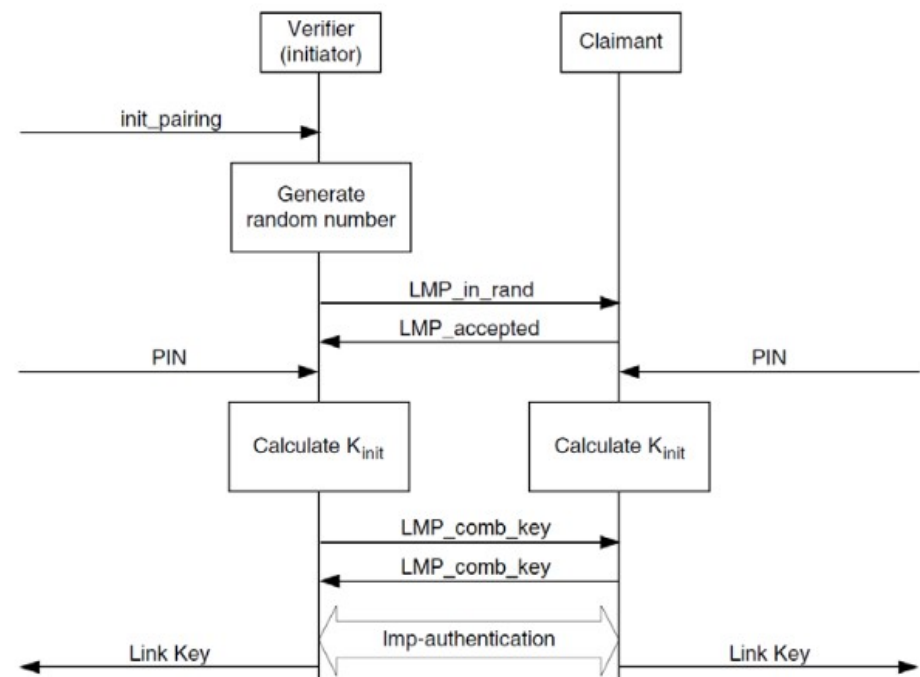

# Evaluation of the security of smartwatch communication

## Bluetooth security and pairing process

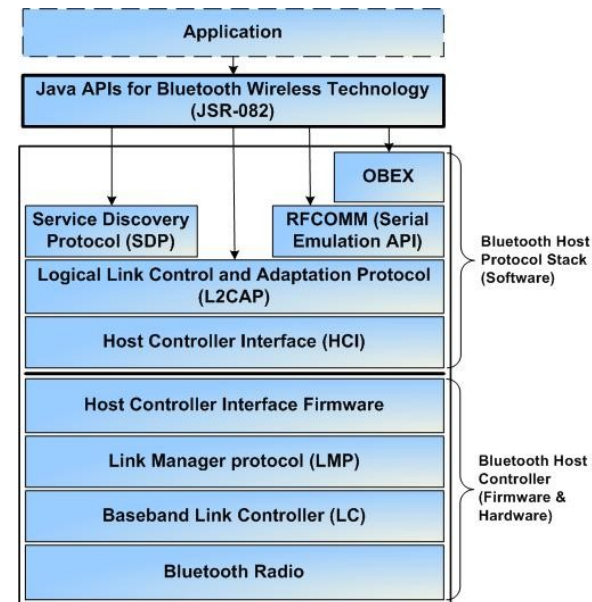

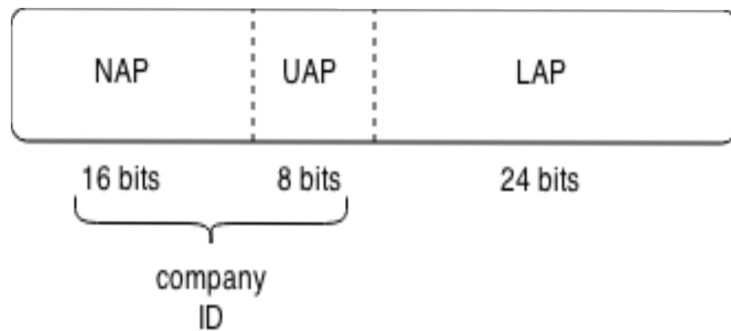

LMP

SSP & MiTM protection

# Evaluation of the security of smartwatch communication

## Methodology

# Evaluation of the security of smartwatch communication

## Results

Explanation of what we can see or not.

System and Network
